SUMMARY

Cybersecurity BBA with enterprise SOC experience in alert triage, log analysis, and incident documentation across Microsoft Defender, Splunk, and ExtraHop, plus daily field work building and configuring networked device fleets. Comfortable at both ends of the stack, from cable termination and provisioning through to MITRE ATT&CK mapping and containment. Targeting security operations and detection engineering.

EXPERIENCE

Installation Technician | Dominion TX Design & Integration **Jun 2026 – Present**

Control4, Lutron, DSC PowerSeries Neo, UniFi, structured cabling, network provisioning

- Build and commission integrated low-voltage systems (security, lighting, shades, AV, and network) for high-profile residential clients, with all subsystems centralized through Control4 over client network infrastructure.
- Provision, enroll, and troubleshoot hardwired and wireless device fleets; run, terminate, and label keypad and device loops; configure scheduled and trigger-based automation logic across whole-home deployments.
- Trace, test, and commission smoke and CO life-safety loops to specification, including end-of-line supervision and head-end verification.
- Completed a full security system installation solo on a residence lacking keypad prewire. Traced a spare 4-conductor run from the smoke loop, located and rejoined mid-run splices, and repurposed it to establish supervision to the head-end without opening finished drywall.

SOC Analyst Intern | University of Texas at San Antonio **Jan – Mar 2026**

MS Defender, ExtraHop, Abnormal AI, Duo, ServiceNow

- Triageed 40+ security alerts over 8 weeks, performing log analysis, root cause analysis, and containment actions including service deprovisioning and MAC address blocking.
- Escalated one alert that resulted in a confirmed incident; documented all findings in ServiceNow tickets written for both technical staff and management audiences.

Junior Cybersecurity Analyst | BEAT LLC **Oct 2025 – Jan 2026**

Nessus, Kali, STIGs, POAMs, KnowBe4

- Performed STIG compliance reviews and POAM documentation workflows in a federal contractor environment under direct mentorship of a cybersecurity director.
- Ran Nessus-based external attack surface assessment and vulnerability enumeration against DoD-adjacent infrastructure.

PROJECTS

Cyber Jedis: Red vs. Blue Training Platform | Co-Lead & Club Administrator **Aug 2025 – May 2026**

Docker, Debian, Python, Bash, Redis, Lua, Unreal Engine 5

- Co-led development of a full-stack, gamified red-vs-blue cyber operations platform across 4+ iterations, owning technical direction, coordination of a 6-person team, and external outreach.
- Built containerized Debian environments with Redis centralized logging, hardened SSH access, real-time sudo approval workflows, and an Unreal Engine 5 SOC simulation layer; demoed to external audiences.
- Served as club administrator, co-leading technical sessions and contributing to post-quantum security research.

Home Network & Segmented Security Lab **2025 – Present**

EdgeRouter 4 / EdgeOS, EdgeSwitch, UniFi, Pi-hole, VLANs, Cat6, Go, Docker

- Designed and built a whole-house Cat6 network from scratch, running home runs from every room to a central distribution point, terminated and tested with a toner/probe kit, on an EdgeRouter 4 core at full fiber throughput.
- Implemented end-to-end VLAN segmentation with a trusted zone and an isolated lab zone, enforcing default-deny firewall policy so the lab segment reaches neither the internet nor trusted hosts. Used to safely host an end-of-life Windows system as a contained target.
- Deployed network-wide DNS filtering (Pi-hole), a managed EdgeSwitch core with 802.1Q trunking, PoE-powered UniFi access points, and a dedicated hardware controller; added a secondary resolver after diagnosing a single-point-of-failure DNS outage.
- Root-caused failures hands-on: recovered a switch stranded on a fallback subnet via static-IP direct connect, and traced a resolver outage to a misconfigured packet-capture path blocking dnsmasq startup.
- Developed and published a network scanner in Go; documenting the build as an ongoing technical write-up series.

EDUCATION

University of Texas at San Antonio | BBA, Cyber Security | Major GPA 3.66 **May 2026**

SKILLS & CERTIFICATIONS

Platforms & Networking: Windows, Linux (Arch, Debian, Ubuntu), TCP/IP, DNS, DHCP, TLS, VLANs, IDS/IPS, structured cabling

Security Tools: Microsoft Defender, Splunk, ExtraHop, Infoblox/BloxOne, Nessus, Snort, Wireshark, pfSense, Duo Admin, ServiceNow

Detection & IR: Alert triage, log analysis, MITRE ATT&CK TTP mapping, containment, vulnerability management, digital forensics

Frameworks & Scripting: NIST 800-53, NIST CSF, RMF, STIGs, POAMs; Python, Go, Bash, PowerShell, SQL, Docker

Certifications: Google Cybersecurity Professional Certificate; IBM Cloud; CompTIA Security+ (in progress)
